- 4) Following ingestion:
 - If swallowed do NOT induce vomiting.
 - If vomiting occurs, lean patient forward or place on left side (head- down position, if possible) to maintain open airway and prevent aspiration.
 - Observe the patient carefully.
 - Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.
 - Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.
 - Possible aspiration hazard.
 - Get medical aid immediately
- 5) Advice to physician:
 - Any material aspirated during vomiting may produce lung injury. Therefore emesis should not be induced mechanically or pharmacologically. Mechanical means should be used if it

 - DO NOT approach containers suspected to be hot.
 - Cool fire exposed containers with water spray from a protected location.
 - If safe to do so, remove containers from path of fire.
 - Dig a ditch to dispose of the firewater and lock it up and keep the material from dispersing.
 - Leakage may cause contamination.
 - In case of tank fire, cool the container with plenty of water even after extinguishing.
 - In case of tank fire, withdraw immediately if there is a high- pitched sound from the pressure release device or if the tank discolors.
 - In the event of a tank fire, withdraw from the tank engulfed in flames.

6. ACCIDENTAL RELEASE MEASURES

- 1) Health considerations and protective equipment:
 - Avoid breathing vapours and contact with skin and eyes.
